

World-class stone IN EDMONTON

ATLAS GRANITE IS ONE OF EDMONTON'S PREMIER suppliers of stone countertops, with over 100 showhomes in Northern Alberta under their belt. Thanks to having suppliers all around the world, Edmontonians have access to a very large inventory of some of the world's finest natural stone products—granite, marble and quartz.

"We shop all around the world for our product—we have suppliers everywhere. In fact, we take on average four to five trips overseas every year, visiting trade fairs, quarries and seeing what's new out there," says Ricky Nayar, CEO of Atlas Granite. They house their slabs including a private collection of exclusive colours in a large warehouse in the city, and manufacture their products in Edmonton. Those products include countertops, bathroom vanity countertops, fireplaces, and tubs and shower surrounds.

"Because we fabricate our own slabs, we don't have to show our customers small samples. So when customers are looking for stone, we can take them down to our warehouse and show them the actual slabs. And that means customers know exactly what their stone will look like. Our pricing is also more competitive because we buy directly from source and we cut out the middleman."

Manufacturing in-house also means customers don't have to wait long for the custom product to be fabricated. Nayar says that from the date you place your order to when you get your countertops is about three to four weeks. Also they are big on automation and have a digital manufacturing plant to fabricate their products.

Nayar: "We use state of the art equipment in our plant including laser, computer numeric controlled machines, edge polishers and robotics to fabricate stone which ensures precision and quality each time, every time."

Atlas offers an optional 15-year sealer warranty on natural stone products, making them one of the few in Edmonton to offer such a long-term warranty.
